

We'd like you to go to Exercise 2, and we have a scenario of a proposed project that could impact Bicknell's Thrush, which is an endangered species.

We would like you to fill out the table for an indicator, impact indicator, cause and effect, for Bicknell's Thrush just as we've done here for this table.

And remember, you're only doing it for one resource. You're doing impacts to the Bicknell's Thrush. So you only need to do one row of that.

Remember, potential impact, identify the indicator for measurement, the data needs you'll need, and the methodology for doing that impact analysis.

Then we'll come back and we'll do a debrief and review what you've come up with.
