EMERGING LEADER 2022 – ART & SCIENCE OF BUDGET PART II: THE ART

PRE-TEST/ POST-TEST CODE HANDBOOK EXCERPTS

INTRODUCTION:

This is a reference document created to support the Art & Science of Budget course Pre-Test and Post-Test. It contains excerpts from two documents: the BLM 2020 Fund Code Handbook, and the FY23 BLM Fund Crosswalk. The excerpts are used to list the most current information for each of the subactivity codes listed as answer choices on the tests.

The purpose of this document is to provide the student the opportunity to research subactivity codes listed for the question and determine which is the best answer choice.

Chapter 7 Subactivity Definitions and Associated Program Elements (Excerpt)

This chapter contains the BLM subactivity definitions and explain what each subactivity can be used for. After the definition, the Program Elements (PE) that can be used with the subactivity are also listed, with the associated workload measure that the PE represents.

L1020

Rangeland Management

Includes all costs associated with management, maintenance, and enhancement of the rangeland ecosystem including: completing priority soil surveys as per the national MOU between the BLM and NRCS to cooperatively conduct soil survey work; correlating ecological site information to mapping unit or component; conducting on-the-ground projects to improve soil stability and reduce erosion; processing grazing authorizations; conducting compliance, monitoring, and development of grazing management structures; and, noxious weed treatments and control.

Cultural Resources Management

Includes all costs associated with management, maintenance, and enhancement of prehistoric and historic cultural resources and paleontological resources. Does not include costs for consideration of impacts to cultural resources from proposed land-use, when required, (e.g., Section 106 of the NHPA and NEPA review) which are properly coded to the benefitting subactivity.

Aquatic Habitat Management

Includes all costs associated with fish and aquatic habitat conservation, hydropower licensing, fish passage, the control of aquatic invasive species, monitoring water resource condition and trends, and collaborating with soil resources and other programs to reduce sediment discharges into waters. Also includes the costs associated with collecting and analyzing water resources data needed to maintain, protect, and restore water resources effectively, as well as applying expertise to assess and improve the productivity and resiliency of these resources on public lands.

L1170

Wildlife Habitat Management

Includes all costs associated with maintaining, improving, or enhancing wildlife habitats (or populations in Alaska regarding the Subsistence Program). Includes all costs directly associated with the protection, conservation, recovery, and evaluation of populations and habitats of Endangered Species Act (ESA). Threatened, endangered, proposed and candidate species and special status animal and plant species as defined in BLM Manual 6840. Chargeable items include those actions that directly benefit the special status populations and habitats, such as preparation of land use plans or other activity plans that are directly related to T&E species habitat, resource protection and investigation, preparation and implementation of educational outreach programs, and Section 7 consultation on Bureau special status species conservation and recovery actions. Does not include costs of compliance with the ESA Section 7 consultation and associated mitigation which result from the implementation of other resource program activities. Those activities should support consultation costs consistent with benefiting activity principles. Charges to L1170 should generally be restricted to Goal 2 – Health of the Land Program Elements. It is inappropriate to charge this program towards PEs associated with use authorization, or compliance and enforcement work processes. Both L1170 or L11705 are available for T&E related expenditures.

L1314

Oil and Gas Inspection & Enforcement

Includes all cost associated with carrying out the oil and gas inspection and enforcement program to include:

- Inspect existing oil and gas authorizations, roughly 29,000 annually; determine the adequacy of operators' financial bonding, with a review of risk factors to weigh potential liability; and evaluating well inventories in the field to address inactive wells. The BLM uses a risk-based inspection strategy and is focused on inspecting 100 percent of the high priority wells, as designated by BLM's risk-based inspection strategy.
- Inspect producing oil and gas wells and ensure proper reporting of production.
- Take enforcement actions to ensure compliance with terms and conditions of leases, APDs, and other authorizations. This includes compliance with environmental conditions and identifying Drilling Without Approval or trespass wellbores.
- Approve reservoir management agreements to provide for the orderly development of oil and gas fields.
- Evaluate oil and gas fields for drainage (fluid minerals on Federal land removed through a well on adjacent private land), and taking administrative actions, if necessary, to protect Federal mineral interests.
- Protect the environment by plugging and reclaiming orphan oil and gas wells drilled by previously existing oil and gas companies; remediating the Alaska Legacy Wells originally drilled by the Federal Government (U.S. Navy and U.S. Geological Survey); and ensuring plugging of the shallow coalbed methane wells in the Powder River Basin of Wyoming.

The BLM performs several different types of oil and gas inspections in an effort to ensure that the American people receive the benefit of the natural and mineral resources on their lands and to ensure that those resources are managed in an environmentally responsible manner to include:

- Production Inspections
- Drilling Inspections
- Abandonment Inspections
- Workover Inspections
- Environmental Inspections
- Records Verification Inspections
- Undesirable Even Inspections
- Alleged Theft Inspections, and
- Idle Well Inspections

Cadastral, Lands and Realty Management

Includes all costs associated with processing authorizations and compliance associated with reimbursable and non-reimbursable realty actions and withdrawals. Also includes administration of land title records. Casework costs associated with major category R/W reimbursable applications are funded under subactivity L5101. Casework associated with minor category R/W applications are funded under L5102. Work associated with communication site R/W is funded under L1492. To the extent possible, land exchanges, sales and purchases/donations should be coded against benefitting subactivities. Includes all costs associated with performing non-reimbursable cadastral survey and Public Land Survey System (PLSS) data collection and maintenance outside of Alaska. Does not include costs associated with surveys and the PLSS Data Set in support of Alaska Conveyance, which is properly coded to subactivity L1410. This subactivity combines the previous L1420 and L1430.

L1644

Abandoned Mine Lands and Hazardous Materials Management

The Abandoned Mine Lands and Hazardous Materials Management program was created through a combination of the separate programs in fiscal year 2019. A new subactivity was created, L1644, and the L1620 AML and L1640 HMM subactivities were retired in FBMS. The focus of this subactivity is on environmental risk and physical safety hazards to protect the health and safety of public land users and environmentally sensitive resources. This subactivity emphasizes the use of risk assessments when determining the probability of occurrence of an environmental or physical safety hazard, and the potential effects on human health and the environment as a result. From that risk characterization, BLM personnel can prioritize cleanup actions on likely and confirmed contaminated sites as well as for physical safety hazards, in keeping with the agency's stewardship mission of multiple use and sustained yield of the natural resources we manage.

Priority actions taken under this subactivity will protect those resources held in trust for the public, clean up environmental contaminants, reduce and eliminate risks associated with environmental hazards, restore natural and cultural resources adversely affected by oil discharges and hazardous substance releases, reduce the generation of waste products and contaminants at the source and remove those materials deposited on public lands, continue the process of inventory and characterization of AMLs and other types of hazardous sites, and, through partnerships with local communities and other stakeholders, leverage funding and in-kind resources to reduce risk and eliminate known hazards.

AML actions are exclusive to the type of feature, those associated with historic hardrock mining activity on BLM-managed lands. The features must have been abandoned prior to January 1, 1981, the effective date of the BLM's surface management regulations (43 CFR Subpart 3809). Work includes inventory, studies, planning, potentially responsible party searches, reclamation, remediation, and the maintenance and monitoring of treatments/closures of the feature hazards addressed in prior years. The WBS suite to be used for AML projects starts with LXAM.

HMM activities include the cost of protecting Public Land from hazardous materials and/or wastes. Costs include identification, evaluation, and remediation of hazardous materials sites; the costs associated with the proper management of hazardous substances at BLM facilities; and efforts to minimize future liabilities and costs to the Federal government. The WBS suite to be used for HMM projects starts with LXHM.

Most of the work listed above could also be eligible to receive funding, as appropriated, from the Central Hazardous Materials Fund (L2641 and L2641), Repair of Damaged Lands

Administrative Support

Includes the costs of providing specified Bureau wide and office-wide administrative support services, including financial management, budget formulation and execution, personnel administration, EEO program management, procurement and contracting services, property management, and general records and directives systems management. This subactivity includes only the costs of those specified programs which are clearly administrative in nature and broadly support the entire organization. Simply because a function is support in nature and benefits several programs does not qualify the cost for coding to this subactivity. These other generic support costs must be coded either to the Program Support Costs subactivity (if they fit that definition), or otherwise must be coded directly to the benefitting subactivity(s).

L1990

Mining Law Administration

Includes all costs of functions relating to the administration of the mining laws and FLPMA on Federal lands where mining claims are involved. This includes recording and adjudication of mining claims, adjudication and processing of mineral patent applications, adjudication and processing of SRHA filings, issuance of decisions and contest actions, mineral examinations of mining claims, processing of notices and plans of operations, occupancy trespass resolution, environmental assessments related to mining law actions, administration and adjudication of bonds, and related mining law work. In addition, subactivity L1990 includes all costs associated with recording, administering, adjudicating, collecting, and processing mining claim maintenance and location fees. Funding for this subactivity is derived from the fees collected and deposited to the L1993 account.

Authorization

The Omnibus Budget Reconciliation Act of 1993 authorized the collection of mining claim maintenance and location fees for a five-year period. Since 1998, this authority has been re-authorized usually by the annual appropriations act. These Acts also authorize the BLM to retain a portion of these fees for management and operations related to the General Mining Law of 1872, as amended. Annual appropriation acts establish the amount of the BLM's appropriation to be used for Mining Law Administration Program (MLAP) operations and require that the mining fees collected be credited against the appropriation until all funds used for MLAP are "repaid."

Bureau Policy

It is Bureau policy to assure that monies appropriated for the Mining Law Administration Program are properly expended and recorded in the financial systems. Any costs coded to the program must directly relate to or directly benefit the program. Using MLAP funds for purposes unrelated to the administration of the Mining Law is a violation under 31 U.S.C. § 1301 (a). Any false entries or reports of expenditures is a violation of 18 U.S.C. § 2073. It is Bureau policy that supervisors shall ensure all employees charging time to MLAP follow this policy. Supervisors are responsible for ensuring that employees charging time to MLAP are performing work that is directly related to the program's activities. Any bonuses or awards financed with program funds must be directly related to activity in the program. Contracts and services charged to MLAP must relate directly to the administration of the Mining Law. If MLAP contributes a portion of the costs for contracts or services, then the charges must be proportioned equitably to each participating program. Overhead support costs and shared service costs must be shared equitably among benefitting sub-activities. Those costs that include MLAP must be equitably proportioned.

Mineral Reports

The benefiting subactivity for mineral reports and valid existing right (VER) determinations is the program which initiated the need for the report. Examples include:

- If a mineral report or a VER determination is required for a land exchange, the benefiting subactivity is Lands and Realty Management. All the work and any clearances required to accomplish this exchange must be coded to the appropriate lands sub-activity.
- A validity examination on a mining claim, located within a specially designated, withdrawn or segregated area, initiated by the BLM for the purpose of determining if there is a valid existing right must be coded to the benefiting sub-activity. The sub-activity that initiates the VER determination is responsible for the expenditure. For instance, if the mining claim is located within a monument, the cost of performing VER work would be charged to the sub-activities designated for use in the monument. Work performed to process any subsequently filed notice or plan of operations is coded to L1990.
- Cost recovery applies to notices and plan of operations that require a mineral examination under 43 CFR 3809.100.

Surface Management

Cultural clearances, Threatened and Endangered species (T&E) survey, and other site review and data gathering activities required because of surface disturbing activity associated with a notice or a plan of operation under 43 CFR 3809, are appropriately charged to L1990 to the extent necessary to determine if the proposed action will result in unnecessary or undue degradation or significant impacts for those operations requiring NEPA. These activities should be limited to the area impacted by the activity. If the survey includes more area than stated in the notice or plan, including any required buffer zone, the work for the additional area must be coded to the benefiting sub-activity.

Mining disturbances may be reclaimed using L1990 funds where the operation occurred or continued to occur after January 1, 1981 and were conducted for the exploration or extraction of minerals locatable under the General Mining Law of 1872, as amended. Abandoned Mine Lands (AML) program costs are appropriately coded to L1620 sub-activity, and should not be coded to L1990. This includes all disturbances abandoned prior to January 1, 1981.

Law Enforcement

Enforcement of surface management orders are properly coded to L1990 by Law enforcement personnel. All costs of law enforcement should be charged to one of the following program elements: NU, NV, NY, NZ, and OA.

Priority Program Elements

Priority program elements for L1990 are EW, EX, EY, EZ, FL, NI, and NJ. The expenditure of Mining Law Administration funds on administrative, program management, non-priority work or other program elements should be carefully monitored.

Rangeland Improvements, Land Utilization Lands (WBS Required)

These funds are derived from fees for uses of Land Utilization Project (Bankhead-Jones Farm Tenant Act) lands transferred to the jurisdiction of and managed by the BLM. Includes costs associated with planning, survey and design, and project development for rangeland improvement projects and land/vegetation treatment projects benefiting grazing, wildlife, wild horses and burros, or rangeland ecosystem.

Wildland Fire Preparedness

Includes all costs of planned and predictable fire and aviation management preparedness activities that occur in an average annual fire season as defined in approved State and Field Units Fire Management Plans (FMP). A fire or project number is required when assigned to wildland fire operations activities (suppression operations or emergency stabilization)).

Allowable activities under Preparedness include the following costs:

- The costs of hiring and training Bureau personnel, including permanent, seasonal and temporary personnel;
- Salary costs for base 8 hours of regular fully funded fire preparedness employees, up to 40 hours per week, including when responding to wildfire suppression duties;
- Boot stipends for fire funded personnel;
- Prevention and detection activities;
- Operating and annual maintenance costs for support facilities;
- Purchase and contracting costs for equipment, aircraft, supplies, support, planning, and coordination;
- Purchase of capitalized, traceable, durable, and consumable equipment and supplies to outfit fire management personnel, including militia and emergency firefighters, for fire response (excludes fire stores procurement);
- Replacement of capitalized, traceable, and durable equipment and supplies that reach the end of their service life;
- Policy development and oversight;
- Aviation costs for exclusive use aircraft availability;
- Aviation flight hours and other use costs for pilot and crew currency requirements, training, or Preparedness related missions;
- Information management and decision support systems; and
- Predictive services costs.

This activity also includes the program management costs for the bureau's aviation management program. The operational costs of aviation activities are to be finance by the benefiting activity.
