

## WIS Resources Summary

To round out the session today we'd like to summarize and provide you some resources for further information. At the end of this session we've included a number of resources for your use. We've included blank and completed submission forms so you can know what those look like. We've included sample e-mail notifications that you'll get along the way. We've included a trading partner agreement for your use. We've covered a bunch of helpful hints and provided some web based resources and lastly we'll provide you some contact information.

But first let's review what we've covered today. Our original objective for this training was for you to be able to access and use the online BLM Well Information System or WIS for electronic permitting and to be able to do basic trouble shooting for common issues. Then we went into a little bit more detail and we talked about the WIS overview, how to log on and establish an account, how to find the WIS web page, how to access an account and then the basic form creation for the four forms; the notice of staking, application for permit to drill, the well completion report and the sundry notice form. Then we gave you some advanced features of the WIS web site; we did an overview for troubleshooting common problems in WIS and then lastly we closed out with some resources and a summary.

If you need help at any time you can contact the WIS help desk at the number shown on the screen right now. We have a post office box and if you need to

## WIS Resources Summary

send us something overnight you can actually submit it to a physical street address.

I would like to thank you for your time today as you have viewed this training session. I would also like to thank all the staff at the National Training Center here in Phoenix who have made this session possible. I hope you have found this presentation helpful and informative, and I hope you have come away with tools to help do your job smarter, faster and more efficiently.
